

TOP 10 DOCTORS IN DALLAS

Congratulations **Dr. Wm. Richard Salter** Voted Top 10 Dallas
Doctor For Third Consecutive Year

2009

2010

2011

Dr. Wm. Richard Salter was born and raised in Memphis, TN. After graduating from high school, he attended Abilene Christian University and graduated cum laude in 1983. After graduation, he did a year of research at Texas Tech Medical School, and then began medical school there in 1984. After residency, Dr. Salter moved to Texarkana, TX and began his Ob-Gyn practice with a multi-specialty clinic there. After two years in Texarkana, he and his wife decided to move to Dallas. He joined a large single-specialty Ob-Gyn group, and established an office in Garland, Texas in 1995. With two of his partners, Dr. Salter decided to leave the large group and start his own group, Advanced Ob-Gyn Associates, opening the new practice on 4/1/08.

Dr. Salter's practice involves routine and high risk obstetrics, routine office gynecology, minimally invasive in-office gynecologic procedures, minimally invasive major and minor gynecologic surgeries, initial infertility evaluation and treatment, and early stage gynecologic cancer surgery. He has hospital privileges at Forest Park Medical Center, Baylor Plano Medical Center, Baylor Garland Medical Center, and North Garland Surgery Center. Dr. Salter is also a clinical faculty member of the Baylor Garland Family Practice Residency program, and helps in the training and education of the Family Practice residents in obstetrics and gynecology. In addition, he is a frequent speaker at national medical meetings on minimally invasive office procedures, including Essure and Her Option, and assists in training physicians in these and other surgical procedures. He is also one of the few Gynecologists in Dallas to use the da Vinci robotic surgical system on all of his major gynecologic surgeries, giving his patients the opportunity to have a quicker recovery and return to normal activities. Dr. Salter is frequently interviewed by the local Dallas-area news channels where he is asked to discuss women's health care issues, trends, and new technology.
